JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

reads it, that when this terrible war is over and Dr. Chapman resumes his ornithological work, he may be able to prepare other similar contributions for which much material is already available at the American Museum. Surely no one today is better equipped for the task.— W. S.

Gee and Moffett's 'Birds of the Lower Yangtse Valley.' — This little volume,¹ apparently reprinted from the columns of a newspaper, is a well prepared account of the more common birds of the region of which it treats, intended to meet the needs of those who wish to become familiar with the wild bird life of China. There is a good description of each species with an outline of its general distribution, an account of its nest and eggs and some general notes on its habits and history. The material is compiled from various reliable sources and includes as well the observations of the authors and those of the late Dr. Paul D. Bergen.

"The greatest lack in ornithological literature of China," say the authors, "is not the scientific descriptions of species — perhaps few remain yet to be described — but the sort of careful popular study that has taught us so much of the intimate ways of the birds of America and England." As an attempt to fill this want the present work is a very praiseworthy effort, and will be welcomed alike by those who are able to study Chinese birds on the spot and those in far away lands, who wish to know something of the everyday familiar birds of this interesting country.— W. S.

Mathews' 'Birds of Australia.' — Part six² of volume six of this notable work is now before us, completing the treatment of the Parrots. Eight species of the genera *Neonannodes*, *Neophema*, *Lathamus*, *Melopsittacus*, *Pezoporus* and *Geopsittacus* are figured and described. There is also an appendix giving the description of *Platycercus elegans fleuriensis* Ashby, already published in 'The Emu,' and some supplementary notes by the describer. Also a correction in which the generic name *Suavipsitta* (p. xix) is proposed for *Nannopsittacus* Matthews, preoccupied by *Nannopsittaca* Ridgway.

In the main text of this part we find the following new name proposed: *Neonannodes chrysostomus cyanopterus* (p. 446), Victoria.— W. S.

Kalmbach on the Crow and its Relation to Man. — The continued demand for information regarding the economic value of the Crow and the exhaustion of the supply of previous bulletins on the subject, have resulted

¹ A Key to the Birds of the Lower Yangtse Valley with Popular Descriptions of the Species Commonly Seen. By N. Gist Gee, Soochow University and Lacy I. Moffett, Kiangyin. Shanghai: Shanghai Mercury Limited, Print. 1917. pp. 1-221, with index (i-xix) and errata (iii-iv).

² The Birds of Australia. By Gregory M. Mathews. Vol. VI, Part VI. December 11, 1917.
